

5 TIPS for a hotel network that guests & staff both love

Tip 1

Pick a WiFi solution that suits your business

One size fits all won't work here. Every hotel's needs are different. Spend time finding the right network now and it will pay off with low-effort management and high customer satisfaction later.

Tip 2

Offer a smooth smart TV experience

From casting content to browsing streaming apps, a smart TV experience is a shortcut to a happy guest. Find a tailor-made solution and network switch to ensure your WiFi has the muscle for the job.

Tip 3

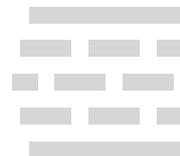

Stay competitive with strong connectivity

High bandwidth and speed allow smooth connections for many devices without affecting operational efficiency. Sounds difficult? It's not: WiFi 6 or 5G are designed with these exact scenarios in mind.

Tip 4

Secure network access and data

Separate guest and staff networks to ensure connection and data security. To do so, use a firewall or pick a solution that supports secure hotspot WiFi onboarding and authentication methods.

Tip 5

Simplify & futureproof network management

Post-COVID, hotels have smaller staffs and evolving connectivity demands. Your network needs to grow with you and automate itself, like moving to the cloud to save time/money and up your scalability.
