Customer Background

QualityConta is a business consultancy firm in Madrid, which offers business advisory and consulting services to companies and businesses of all sectors. It also provides advisory services for foreign companies established in Spain.

"It is essential to guarantee the continuity of the work, not only during Covid-19, but in any incident that may arise. Furthermore, at QualityConta we promote and encourage the reconciliation of work and family life for our employees, which is why we consider it essential to have the support of effective technology like Zyxel's solution to support this policy."

Javier Montero
General Director, QualityConta

Summary

The business consultancy firm QualityConta in Madrid planned to implement a fast and secure WiFi infrastructure that can deliver a fast computer network for both employees and guests, and advanced perimeter security to protect against cyberattacks. The implementation has been carried out by Infotecnika Ingeniería de Sistemas SL, which is Zyxel's solution partner. To increase network speed, category 6A cabling and smart managed switches were implemented to provide an intelligent and easy way to administer management. Besides, the advanced ATP firewall equipment can protect against malware, cryptojacking, ransomware and block unauthorized applications in a sophisticated way. The firewall features Device HA (High Availability) that can ensure business continuity and security protection without interruptions. Given the current need for teleworking, the two ATP firewalls can support up to 150 external SSLVPN connections for remote workers to access their network resources easily, quickly and with greater security. Besides, the WiFi 6 APs which can be managed via the Nebula cloud networking management platform were deployed to provide high performance and great coverage. The APs include load balancing and offer appropriate service based on the different needs required for guests or personnel outside the company. Zyxel Networks successfully satisfied the customer's need in greater network agility and better business protection.

Challenges

- Implement a new network infrastructure to deliver faster and more secure connectivity
- The network should be able to ensure business continuity and support remote workers

Benefits

- Advanced network that protects against cyberattacks and allows for efficient teleworking
- Fast and secure WiFi network for both employees and guests

Solutions

- ATP500 ATP Firewall
- WAX610D 802.11ax Access Point
- GS1920-24HP Smart Managed PoE Switch
