

Zyxel WiFi 6E-enabled Countries

The driving demand for bandwidth in today's networks is exploding. The massive increase of connected clients and IoT devices, bandwidth-sensitive applications, and cloud service adoption results in WiFi congestion and creates unhappy users. Without sufficient capacity, organizations cannot fully reap the benefits of their high-bandwidth, low-latency applications. WiFi 6E, the extended version of the WiFi 6, provides a huge innovation leap to wireless industry by taking it into a much wider 6GHz radio spectrum that more than doubles WiFi capacity to further meet today's demands and tomorrow's challenges.

This file lists the countries where Zyxel WiFi 6E access points are available for use.*

Zyxel WiFi 6E in the World

(as of May, 2022)

Country Name	
USA	Poland
Netherlands	Hungary
Denmark	Slovak
Sweden	Portugal
UK	France
Belgium	Slovenia
Greece	Spain
Czech Republic	Romania
Norway	Canada
Morocco	Iceland
Germany	Luxembourg
Italy	Bulgaria
Ireland	Switzerland
Austria	

*Please check if your country is included in this list prior to purchase. If the 6E AP is used in the country that hasn't opened the 6GHz, the AP will connect to the 2.45GHz and 5GHz only.
