Customer Background

The Mohali Club is a newly constructed hotel property built with amenities like a gym, restaurant, auditorium, swimming pool, sport activities, and flooded with luxury rooms over its 10,000 square meter space. The hotel in Mohali is a standout in the tri-city area, promising a superb oasis of relaxation and diversion from everyday life. The world-class facilities play host to a wide range of indoor and open-air events, as well as a broad library and social projects.

Summary

The Mohali Club wanted to provide best customer experiences to visitors with top-grade hotel amenities and WiFi services. They approached the experienced local partner IT INFOCOM to find an ideal WiFi solution. Zyxel's wireless and cloud networking solutions were among the first to be recommended to the hotel.

Zyxel USG310 security gateway provided comprehensive network security connecting to GS1920v2 series smart managed switches with robust network connectivity. To provide the best-in-class WiFi connectivity to all the visitors, the hotel installed indoor WAC6103D-I access points that feature dual radio and dual-optimized antennas. Thanks to the Nebula solution, the network devices can be centrally managed easily without hassle. After the installation, the hotel is pleased with the products and services, and looks forward to having long-term cooperation with Zyxel Networks.

Challenges

- To build a high-quality WiFi network from scratch and solve coverage issues
- To manage and connect network centrally
- To safeguard the whole network with a comprehensive cybersecurity solution

Results

- Zyxel access points and smart managed switches deliver fast and high-quality WiFi connectivity
- Nebula Control Center allows the hotel to manage the network centrally via the cloud platform
- USG310 security gateway ensures the network is well protected from cyberthreats

Solutions

- USG310 Unified Security Gateway
- GS1920-8HPv2/24v2 Smart Managed Switch
- WAC6103D-I 802.11ac Access Point
- Nebula Control Center (NCC)
